social bookmarks

» del.icio.us is a social bookmarks manager. It allows you to easily add web pages you like to your personal collection of links, to categorize those sites with keywords, and to share your collection not only among your own browsers and machines, but also with others.

» Once you've registered for the service, you add a simple bookmarklet to your browser. When you find a web page you'd like to add to your list, you simply select the del.icio.us bookmarklet, and you'll be asked for information about the page. You can add descriptive terms to group similar links together and add notes for yourself or for others.

» You can access your list of links from any web browser. Your links are shown to you with those you've added most recently at the top. In addition to viewing by date, you can also view all links with a specific keywords (you define your own keywords as you add the links), or search your links for keywords.

» What makes del.icio.us a social system is its ability to let you see the links that others have collected, as well as showing you who else has bookmarked a specific site. You can also view the links collected by others, and subscribe to the links of people whose lists you find interesting.

Web Community Fights Blog Regulation

"Are bloggers going mainstream? Web log founders who built followings with anti-establishment postings are now lobbying the establishment to try to fend off government regulation. Some are even working with a political action committee, lawyers and public-relations consultants to do it.

"They say they have no choice.

"There's a certain responsibility I have to help protect the medium. I have the platform, the voice to be able to do so," said Markos Moulitsas Zuniga, founder of the [Daily Kos](#) Web log.

Moulitsas testified Tuesday at a hearing on a Federal Election Commission proposal that would extend some campaign finance rules to the Internet, including bloggers. He urged the FEC to take a hands-off approach."
